

Michael Salloum

Fullstack Web & Systems Software Engineer

michael.business.lb@proton.me | [+96170222870](tel:+96170222870) | github.com/MMinusOne | linkedin.com/in/michael-salloum-swe

SKILLS

TypeScript/JavaScript | Node.js | Rust | C++ | C# | Python | HTML/SCSS | Typst | XAML | Luau | Next.js | Angular | Astro | Tailwind | Electron | Express.js/Nest | Axum | WPF | Docker | Git/Github | Code Design | Linux | REST/gRPC | Concurrency | Computer Architecture | System Design | Operating Systems

WORK EXPERIENCE

PCandParts

Jun 2024 - Sep 2024

Fulltime Technician & Software Developer

- Developed internal business software that automate and streamline daily workflows with TypeScript, Electron & React.
- Handled hardware/software troubleshooting and IT support for computer systems.

MultiLane

Jun 2025 - Sep 2025

Software Developer, Intern

- Designed software based on C#/WPF for the frontend, and C++ for the backend, bridging them together with C++/CLR applying MVVM, MVC and SOLID design patterns.
- Worked with Angular/Azure/Python to develop an internal business solution as a web platform.

PROJECTS

EditorRs

Currently

- A video editing engine made with Rust, based on video_rs and FFmpeg.
- Can render videos at 24fps at 3x realtime speed.
- Utilizes CPU parallelism with GPU for frame image rendering and muxing audio.

AlgorithmicPlus

June 2025

- Open-Source Rust & TypeScript framework for developing and optimizing algorithmic financial models, with concurrency and parallelism, and standard library of math functions & optimization algorithms.
- Tauri-based TypeScript GUI with powerful charting tightly integrated with the backend.

TA6P

April 2023, April 2026

- Automated systems for video generation that attracted 300,000 monthly viewers when deployed.
- Built with Remotion, Bun, Python, Rust, TypeScript...
- Infrastructure managed with Google Cloud, AWS, Runpod, Contabo, and Garage S3.
- Systems used a combination of LLMs(RAG, agentic loops, vector embeddings...), and web scraping for data collection

AniPlus

September 2024

- Content streaming web platform for foreign media, built with Next.js, TailwindCSS, and DaisyUI.
- Deployed on Coolify with CI/CD and version control via Github.

Sharper

July 2025

- Interpreted programming language built with C++ supporting variables, functions, loops, classes, operators, and a standard library.

HenimiyaOS

December 2025

- A primitive Operating System that runs on QEMU.

ACHIEVEMENTS

- **1st Place (July 2026):** AUB ACM competitive programming competition.
- **1st Place (April 2025):** USJ Computer Science Rally Paper.

- **3rd Place (March 2025):** AUST Cybersecurity competition.
